EDUCATION

Georgia State University, *B.B.A in Computer Information Systems.*

May 2029

Concentration : *Cybersecurity*

Minor : *Computer Science*

EXPERIENCE

AI/ML Intern, *PIPRA Solutions*

June 2026 - Aug 2026

- Built a health monitor for dock cameras that detects position drift and lens fouling through a health state machine, with Twilio WhatsApp/SMS alerting and a Streamlit dashboard, validated against live RTSP footage.
- Built an LLM quantization pipeline (HuggingFace to GGUF to K-quant) with llama.cpp, compressing Gemma 2B from 4.9 GB to 1.6 GB and running CPU-only inference on Raspberry Pi 5 at ~6 tokens/sec; packaged the workflow as two reusable Claude Code skills for the team.
- Deployed an INT8 ResNet18 classifier to Raspberry Pi 5 (90.2% accuracy, 10.77 MB, 3.26 ms latency) after diagnosing why MobileNetV3-Small failed under 8-bit quantization.
- Built an offline tool that detects and clusters repeated symbols on ISO piping drawings using DINOv2 embeddings, and Dockerized a PaddleOCR text extractor for the same drawings.

Chief Financial Officer, [Progsu](#) (*Programming Club at Georgia State*)

August 2026 - Present

Director of Finance, Jan 2026 - August 2026

- Managed a \$100,000+ budget for Hacklanta across 8 categories (venue, catering, marketing, infrastructure), delivering the 1000+ participant event 12% under projection .
- Closed \$50,000 in corporate sponsorships from 9 partners including Cox, Adobe, and MBDRNA, and tracked every sponsor deliverable through to fulfillment
- Consolidated sponsorship, university, and grant funding into a single Notion dashboard for monthly reports to university administration, cutting report prep time by 50%

Organizer, [Hacklanta](#)

Feb 2026 - Present

- Co-organize Georgia State's largest hackathon, with 1,000+ participants from universities all over georgia
- Own sponsor and vendor relations, securing \$50,000 in cash and in-kind support sponsors.
- Lead a 6-person team handling finance and budgeting for the event.

PROJECTS

[Presnt](#), *Next.js, Supabase, Gemini, Web Speech API*

January 2025 - December 2025

- Built and deployed a voice-controlled presentation tool that turns natural-language commands ("go to the pricing slide") into slide navigation, using Gemini to match spoken requests to the right slide.
- Built a PPTX/PDF import pipeline so any uploaded deck can be presented hands-free, deployed on Vercel with a Supabase backend.

[Edge Image Classification](#), *PyTorch, ONNX Runtime*

- Quantized ResNet18 to INT8 for Raspberry Pi deployment: 90.2% accuracy, 10.77 MB, 3.26 ms latency
- Diagnosed why MobileNetV3-Small collapsed under 8-bit quantization (92% to 15% accuracy) across 14 configs, and chose ResNet18 despite its lower FP32 accuracy.

TECHNICAL SKILLS

Languages: Python, HTML, CSS,

Tools/Databases: Git/GitHub, Cursor, VS Code

Professional Skills: Budget Planning, Financial Literacy, Technical Documentation, Prompt Engineering.

Certifications: Certifications: CompTIA Security+ (expected September 2026)
